

## Sustain E+- the way to sustainable Erasmus+ projects

If you are a specialist in the delivery of European Erasmus+ projects or a person involved in such projects, this press release is for you!

The international Sustain E+ project is an initiative focused on supporting staff involved in projects by Erasmus+ based on the development of green and sustainable project proposals

The cooperation has produced results that may be not only interesting but also helpful. It is about training on improving skills in environmentally friendly projects within the framework of the Erasmus+ program and the training platform.

[The Sustain E + platform](#), consisting of nine modules, offers opportunities for education, knowledge acquisition, and self-development for anyone who decides to learn about the topic. The individual chapters allow you to expand your skills, gain valuable information, and provide for your development in sustainability-related aspects. The graphic representation of the content of training modules and a brief description of the materials included are below.

These modules offer practical knowledge of EU-funded projects and the Sustainable Development Goals. In addition, you will also gain information on digital governance, energy and water efficiency, transportation, and mobility (with an emphasis on reducing CO2 emissions), the closed-loop economy, international meetings, and the development of food production in sustainable EU projects. Our e-learning proposals are waiting for you as a guide towards the sustainable future we can achieve with Sustain E+, among others.
